MiTek® Releases Inaugural Sustainability Report

June 3, 2024 – Chesterfield, MO. – MiTek, a global supplier of integrated software, services, engineered products, and automated solutions for the building industry worldwide, is releasing its inaugural Sustainability Report. The report outlines the company's progress within the framework of environmental, social, and governance (ESG).

“As an innovator and leader in the construction industry, MiTek recognizes that ESG factors are critical considerations for businesses worldwide,” said Rachel Seward, MiTek SVP of Corporate Communications and Corporate Social Responsibility. “Embracing sustainability represents a commitment to responsible business practices that benefit MiTek and our stakeholders, driving positive business outcomes such as a safety-first work culture, enhanced transparency and accountability, and decreasing our environmental impact. Our Sustainability Report represents a major milestone in our maturation as a company and will allow us to share our story with key stakeholders and bring others along with us on our sustainability journey as we continue striving to make a positive impact on people and our planet.”

MiTek uses a sustainability lens to evaluate ways to solve critical issues facing the building industry, such as the construction labor crisis and increasing demand for housing. Embracing sustainable business practices enables the company to better meet these challenges.

The report is the latest step in an ongoing process that kicked off in 2022 when the company conducted a greenhouse gas assessment and a Materiality Survey. Findings from the greenhouse gas assessment helped to understand the company's current emissions footprint and identify ways to reduce it. The Materiality Survey helped identify and prioritize key sustainability focus areas, such as customer protection and satisfaction, promoting ethical and transparent business practices, and a dedication to safety that significantly impacts team members, customers, and community partners, among others.

“We're proud to share this first-ever Sustainability Report with our customers, team members, community partners, and other important stakeholders, as it provides a snapshot of where we are today and where we are heading on our journey toward integrating sustainable practices into our corporate strategy and operations,” Seward said.

About MiTek

MiTek is a construction technology leader on a mission to advance the adoption of offsite construction. MiTek exists to transform communities through more efficient and sustainable building methods. In 1955, MiTek changed residential construction with the invention of the Gang-Nail plate, providing an affordable and scalable way to manufacture wood trusses. Today, MiTek serves residential and commercial customers delivering software, services, engineered products, and automated solutions that optimize a more integrated Design-Make-Build™ approach to construction. By enabling upfront collaboration across the value chain, including architects, engineers, builders, component manufacturers, and more, we create a single source of truth that guides each design decision and unlocks the power of offsite construction.

With more than 6,000 team members worldwide, MiTek enables the delivery of exceptionally streamlined builds, offering higher quality, increased speed, less waste, and more value, and in turn, transforming how the world builds. As a Berkshire Hathaway (NYSE: BRK-A, NYSE: BRK-B) company since 2001, MiTek has a record of continuous growth and innovation. Learn more at mii.com.
